• Update:

Northern band became active overnight, from between Gan and Male to just south of the Revelle.

Southern band convection remains mainly west of the array now, but we can expect convection developing throughout the day along the shear/confluence zone at the southern part of the southern array, recent soundings are still quite moist at Diego Garcia and the RV Miral.

Day 1 forecast updated to have a less extensive organized convection area west of the southern array and to reflect the northern band. Forecast schematics zoomed into the DYNAMO arrays are in slide 2.
Yesterday’s Summary: 0Z
17-Nov to 18-Nov

Day 1: 0Z
18-Nov to 19-Nov

Day 2: 0Z
19-Nov to 20-Nov

Day 3: 0Z
20-Nov to 21-Nov

Day 4: 0Z
21-Nov to 22-Nov

Day 5: 0Z
22-Nov to 23-Nov
