• Update:

The last several hours of animated IR satellite images suggest that the low pressure system is forming just east of the northern array (near 2N, 82E) with convective bands to the southeast, southwest, and north of the center. The southwest band will continue to bring widespread convection throughout the northern array.

No change to forecast. Forecast schematics zoomed into the DYNAMO arrays are in slide 2.
Yesterday’s Summary: 0Z
22-Nov to 23-Nov

Day 1: 0Z
23-Nov to 24-Nov

Day 2: 0Z
24-Nov to 25-Nov

Day 3: 0Z
25-Nov to 26-Nov

Day 4: 0Z
26-Nov to 27-Nov

Day 5: 0Z
27-Nov to 28-Nov
